CHAPLIN'S PLANES WITH CORRUGATED FACE.

THE LATEST AND MOST POPULAR IMPROVEMENT.

The above Cut shows the surface of our new Corrugated Bottom Planes. The corrugations afford ample air spaces, and reduce the traction and friction to the minimum.

The corrugations are divided by a series of ribs through the bottom of the planes, giving increased strength without adding to the weight. By this method, we claim not only to meet the demand for a line of Planes having air chambers to relieve the suction, which is sometimes urged as an objection to Iron Planes, but we claim to gain at the same time, by the parallel ribs, added strength and rigidity for our tools.

NEW ENAMELED WOOD HANDLE, CORRUGATED BOTTOMS.
